## PROJECTS

Ecommerce Website:  
**Developer**

Features => \* Built with PHP and MySQL database, this website displays variety of products with prices for visitors in the frontend, and allows for updatable contents.  
\* A backend that allows an admin to upload new products with prices or edit old products. And when authenticated, a user can easily add product to cart, place order, pay online or choose cash on delivery option.

Social Media App:  
**Developer**

Features => \* Simple yet sophisticated social media app build with Python Django Framework and PostgreSQL database.  
\* The website allows the users to add from suggested users, post an update, view a user's profile or posts, like and unlike posts, as well as some other actions.
